SUMMARY

MS Computer Engineering (ASU, GPA 3.81, May 2026) building AI agents that review code, catch bugs, and enforce quality before merge. Designed SiliconCrew — a 21-tool LangGraph agent with an autonomous review loop that reads diagnostic output, identifies defects, patches code, and re-verifies without human input — and sole-built Trezzit (trezzit.com), a production AI SaaS serving **600+ users** with a React + TypeScript frontend and MCP server for tool integration.

TECHNICAL SKILLS

AI Agents & Tooling: LangGraph | ReAct Agents | MCP Protocol | GitHub Integrations | RAG Pipelines | Prompt Engineering | Multi-provider LLM Routing | Tool Use / Function Calling | Pydantic Validation

Frontend: TypeScript | React | Next.js | Tailwind CSS | WebSocket | Monaco Editor | Zustand

Backend & Infra: Python | FastAPI | Django REST Framework | Node.js | PostgreSQL | Redis | Docker | GitHub Actions CI/CD | Linux

EDUCATION

Master of Science — Computer Engineering (GPA 3.81/4.0)

Arizona State University

Expected May 2026

Tempe, AZ

Coursework: Artificial Intelligence · Reinforcement Learning in Robotics · Perception in Robotics · Foundations of Algorithms · Algorithm/Hardware Co-Design

Bachelor of Engineering — Electrical and Electronics

BMS College of Engineering

August 2022

Bengaluru, India

PROJECT EXPERIENCE

SiliconCrew — AI Agent for Automated Code Review & Correction

Nov 2025 – Present

- Built a LangGraph ReAct agent (21 tools) with an autonomous review loop — on code generation failure, reads diagnostic output, identifies the root cause, patches the code, and re-verifies without human input; an automated review-diagnose-fix pattern applicable to any codebase; achieved **37/92 first-pass** and **5/5 perfect score** on structured code generation benchmarks.
- Implemented a full MCP server (stdio/SSE/HTTP transports, auto-discovery of tool functions) integrating with Claude Desktop, VS Code, and any MCP client — enabling external AI assistants to invoke all 21 agent tools; multi-provider LLM routing across Gemini, OpenAI, and Anthropic with provider-specific quirk handling and quality-based fallback.
- Built the Next.js + TypeScript frontend: 3-panel layout (Sidebar | Chat | Artifacts) with Monaco code editor, execution trace viewer, and real-time WebSocket streaming of tool-call cards; Zustand state management, per-session token + cost tracking across all LLM providers.

Trezzit — Production AI SaaS (trezzit.com)

Feb 2025 – Present

- Sole-built and shipped Trezzit (trezzit.com) — two-pass LLM receipt pipeline (pass 1: extract structured data, pass 2: semantic validation and self-correction) across a provider-abstracted registry of Gemini, OpenAI, Claude, and Grok, improving parsing accuracy from ~60% to 95%+; SHA-256 image deduplication and O(1) stored balance reads via pre-calculated pairwise debts.
- Production infrastructure: GitHub Actions CI with live PostgreSQL service container (995 tests on every push), Redis for caching and rate limiting, DigitalOcean VPS with Nginx + Gunicorn + systemd managing 4 services; PWA with VAPID push notifications, Google OAuth2, and OTP authentication — 60+ REST endpoints, 40 Django models.

HEAL.AI — Healthcare AI with Custom RAG Pipeline

Sep – Nov 2025

- Won 1st place at Devlabs Hackathon; built a custom RAG pipeline without an external vector database — PDF chunking with 2-sentence overlap, Google text-embedding-004 (768-dim) embeddings, cosine similarity retrieval with confidence scoring, and automated FDCPA-compliant dispute email generation via Gemini; FastAPI backend, React + TypeScript frontend.

Intel Automated Self-Checkout — Open Source Contribution

Jan – Feb 2025

- Contributed a real-time sensor data pipeline to **Intel's official open-source self-checkout reference architecture** — multi-transport ingestion layer (MQTT, Kafka, HTTP) for LiDAR and weight sensor streams, Grafana dashboard, and integration documentation; navigated an external production codebase, incorporated reviewer feedback, and had **PR #655 accepted by Intel engineers**.

WORK EXPERIENCE

Systems Engineer

NCR GOLD

Oct 2022 – Apr 2024

Bengaluru, India

- Automated the entire order lifecycle for a wholesale business — production Django platform (PostgreSQL + Celery + Nginx) processing **18,000+ orders over 3 years**; reverse-engineered third-party ERP (zero public API) via SQL schema analysis for bidirectional sync, eliminating ~20 min of manual relay per order.

AWARDS & HONORS

- Won **1st place at Devlabs Hackathon** — HEAL.AI, an AI healthcare assistant with a custom RAG pipeline for insurance Q&A and automated medical bill dispute generation.
- Won **'Best Use of AI'** at Strategy X DevHacks'25 (ASU) — built AdaptED AI, a Gemini-powered platform generating personalized flashcards, quizzes, and learning paths from uploaded documents in a 24-hour hackathon.
- Secured **2nd place at Hack SoDA 2024** (Amazon-sponsored, 24-hour) — built PassGen, a secure offline Chrome Extension for password generation.
