SUMMARY

MS Computer Engineering (ASU, GPA 3.81, May 2026) who likes building AI products that make complicated workflows feel simple and trustworthy. Shipped Trezzit, a live AI application serving **600+ users**, where I improved receipt understanding from **60% to 95%+** through fast iteration, quality evaluation, and product tradeoffs around reliability and cost, and built SiliconCrew, an LLM-based workflow product with self-correction, observability, and eval loops for multi-step tasks.

TECHNICAL SKILLS

AI Product Engineering: LLM Evaluation | RAG Pipelines | Vector Embeddings | Prompt Engineering | Multi-provider LLM Routing | LangGraph | LangChain

Frontend / Product: React | TypeScript | Next.js | UX Iteration | Real-Time Interfaces

Backend / Systems: Python | FastAPI | Django REST Framework | PostgreSQL | Redis | WebSocket | Docker | GitHub Actions CI/CD

Models & APIs: OpenAI API | Gemini API | Anthropic (Claude) API | Streaming APIs | Pydantic Output Validation

EDUCATION

Master of Science — Computer Engineering (GPA 3.81/4.0)

Arizona State University

Coursework: Artificial Intelligence · Reinforcement Learning in Robotics · Perception in Robotics · Foundations of Algorithms · Algorithm/Hardware Co-Design

Expected May 2026

Tempe, AZ

Bachelor of Engineering — Electrical and Electronics

BMS College of Engineering

August 2022

Bengaluru, India

PROJECT EXPERIENCE

SiliconCrew — Autonomous LLM Agent for Code Generation & Verification

Nov 2025 – Present

- Built an LLM-based workflow product with a React/Next.js frontend and FastAPI + WebSocket backend so users could inspect generated outputs, execution traces, and workflow state in real time instead of treating the system like a black box.
- Implemented automated evaluation and self-correction loops that analyze failures, patch outputs, and re-run workflows without human input; achieved 37/92 first-pass and 5/5 on structured code generation benchmarks.
- Added artifact viewers, structured report panels, and per-session token/cost tracking to improve debugging speed and make quality, latency, and cost tradeoffs visible during iteration.

Trezzit — Production AI SaaS (trezzit.com)

Feb 2025 – Present

- Sole-built and shipped Trezzit (trezzit.com), a live AI application serving **600+ users**, to make receipt splitting less manual and more reliable; evolved the core workflow from simple extraction to a two-pass system with validation and correction, improving parsing accuracy from ~60% to 95%+.
- Owned the product end to end: React PWA frontend, Django/FastAPI backend, PostgreSQL, Redis, auth, notifications, and deployment; made practical tradeoffs around latency, model quality, and infrastructure cost while supporting 60+ REST endpoints and **995-test CI**.

HEAL.AI — Healthcare AI with Custom RAG Pipeline

Sep – Nov 2025

- Won 1st place at Devlabs Hackathon; built a custom RAG pipeline over uploaded PDFs with chunking, embeddings, cosine-similarity retrieval, confidence scoring, and automated response generation via Gemini; FastAPI backend, React + TypeScript frontend, developed in a fast feedback loop with teammates.

WORK EXPERIENCE

Systems Engineer

NCR GOLD

Oct 2022 – Apr 2024

Bengaluru, India

- Automated the entire order lifecycle for a wholesale business — production Django platform (PostgreSQL + Celery + Nginx) processing **18,000+ orders over 3 years**; reverse-engineered third-party ERP (zero public API) via SQL schema analysis for bidirectional sync, eliminating ~20 min of manual relay per order.

AWARDS & HONORS

- Won **‘Best Use of AI’** at Strategy X DevHacks’25 (ASU) — built AdaptED AI, a Gemini-powered platform generating personalized flashcards, quizzes, and learning paths from uploaded documents in a 24-hour hackathon.
- Won **1st place at Devlabs Hackathon** — HEAL.AI, an AI healthcare assistant with a custom RAG pipeline for insurance Q&A and automated medical bill dispute generation.
- Secured **2nd place at Hack SoDA 2024** (Amazon-sponsored, 24-hour) — built PassGen, a secure offline Chrome Extension for password generation.
