SUMMARY

Full-stack engineer (MS Computer Engineering, ASU — GPA 3.81, May 2026) who solo-ships multi-tenant platforms researchers and operators actually use — backend services, APIs, web UIs, and observability dashboards. Built Trezzit (app.trezzit.com), a production Python + React 19 platform serving **600+ users** for 12+ months with group-based RBAC, async LLM pipelines, per-endpoint p95 latency, and per-provider token / cost telemetry. Merged **PR #655** into Intel's official self-checkout reference architecture — track record of shipping systems that solved hard problems.

TECHNICAL SKILLS

Full-Stack & TypeScript: Python | TypeScript | React 19 | Next.js | Tailwind | Material-UI | Node.js | Django REST Framework | FastAPI | Async Python | High-Throughput REST API Design | WebSocket Streaming | PWA

AI & LLM Platform: LangGraph | LangChain | MCP Protocol | Multi-provider LLM Routing (Gemini / OpenAI / Claude / Grok) | RAG Pipelines | LLM Evaluation | Tool Use / Function Calling | Pydantic Validation | Cursor | Claude Code

Backend Infra, Observability & Security: PostgreSQL | Redis (caching + rate limiting) | Celery (async background jobs) | Multi-tenant RBAC | Cookie JWT + OAuth + OTP | Per-endpoint p95 Latency Tracking | Per-provider Token / Cost Telemetry | Encrypted Backups | Docker | AWS | DigitalOcean | Vercel | Supabase | GitHub Actions CI/CD | Linux

PROJECT EXPERIENCE

Trezzit — Production Multi-Tenant Platform, Sole Engineer (app.trezzit.com)

Feb 2025 – Present

- Solo-shipped Trezzit front-to-back — multi-tenant Python + React 19 platform serving **600+ users** for 12+ months with **341 components**, **60+ REST endpoints**, **40 DB models**, **995 tests**; Django 5.1 + DRF, PostgreSQL (Supabase), Redis (caching + rate limits 100/hr anon, 10k/hr auth), Celery + Celery Beat + Flower for async background jobs; DigitalOcean VPS (prod) + AWS Lightsail (staging) + Vercel; GitHub Actions CI/CD with prod→staging DB sync and encrypted backups.
- Built a two-stage AI data pipeline routing across Gemini, OpenAI, Claude, and Grok — pass 1 + semantic validation gate + automatic model-upgrade fallback on failure — iterated parsing accuracy from ~60% → **95%+**; production observability layer captures per-endpoint p95 latency, error rates, and per-provider tokens / cost via dedicated LLM-call and API-performance models — the dashboard surface researchers and operators actually use.
- Multi-tenant access & security: cookie-based JWT with auto-refresh + failed-request queuing, Google OAuth via django-allauth, email OTP; group-based RBAC and placeholder users (add collaborators without accounts, claimed on signup); full audit trail with BalanceUpdateLog + BalanceValidationSnapshot, periodic reconciliation, and zero-sum invariant enforcement.

SiliconCrew — Researcher-Facing Platform for LLM Agent Workflows & Evaluation

Nov 2025 – Present

- Built a researcher-facing platform for evaluating autonomous LLM agents on a structured benchmark — Next.js 14 web UI (3-panel layout, Monaco editor, 6 artifact tabs, WebSocket-streamed tool-call cards) over a FastAPI + LangGraph backend (21 tools, multi-provider routing, async ThreadPoolExecutor) with full MCP server (stdio/SSE/HTTP); per-session token / cost tracking, on-disk run-recovery for long evaluation jobs; achieved **37/92 on CVDP** (Comprehensive Verilog Design Problems); public at github.com/naman-ranka/siliconcrew.

HEAL.AI — RAG Pipeline & Structured Output Generation (1st Place, Devlabs)

Sep – Nov 2025

- Won Devlabs Hackathon (1st place)** with HEAL.AI — custom RAG pipeline (PDF chunking + 768-dim Google text-embedding-004 + cosine-similarity retrieval with confidence scoring) over uploaded documents, with automated structured-output generation (FDCPA-compliant dispute emails) via Gemini 2.5; FastAPI + Next.js + TypeScript, Dockerized.

Intel Automated Self-Checkout — Open Source Contribution

Jan – Feb 2025

- Contributed sensor analytics microservice to **Intel's official self-checkout reference architecture** — configurable data pipeline (MQTT, Kafka, HTTP) for real-time LiDAR and weight sensor data with Grafana dashboard; **PR #655 merged upstream** after Intel engineering review.

WORK EXPERIENCE

Software Developer (Sole Engineer)

Oct 2022 – Apr 2024

NCR GOLD

Bengaluru, India

- Engineered a production Django platform (PostgreSQL + Celery + Nginx on DigitalOcean) processing **18,000+ orders over 3 years**; built 3 role-based portals (admin, artisan, customer) with multi-method auth — automated PDF invoice generation and WhatsApp Business API delivery on every state transition, eliminating ~20 min of manual relay per order.
- Reverse-engineered third-party Jewely ERP (**zero public API**) through direct SQL schema analysis; built bidirectional bridge model syncing production weights and ERP status in real time; engineered inbound WhatsApp state-machine chatbot (JSON state per user, admin + customer flows) — full accountability loop across all three portals without disrupting legacy system.

EDUCATION

Master of Science — Computer Engineering (GPA 3.81/4.0)

Expected May 2026

Arizona State University — Coursework: Artificial Intelligence · Foundations of Algorithms · Reinforcement Learning in Robotics · Perception in Robotics · Algorithm/Hardware Co-Design

Tempe, AZ

Bachelor of Engineering — Electrical and Electronics

August 2022

BMS College of Engineering

Bengaluru, India

AWARDS & HONORS

- Won **1st place at Devlabs Hackathon** — HEAL.AI, an AI billing assistant with a custom RAG pipeline (768-dim embeddings, cosine-similarity retrieval) for insurance Q&A and automated dispute-email generation.
- Won **'Best Use of AI'** at Strategy X DevHacks'25 (ASU) — built AdaptED AI, a Gemini-powered platform generating personalized flashcards, quizzes, and learning paths from uploaded documents in a 24-hour hackathon.
- Secured **2nd place at Hack SoDA 2024** (Amazon-sponsored, 24-hour) — built PassGen, a secure offline Chrome Extension for unique password generation.
