SUMMARY

Product engineer (MS Computer Engineering, ASU — GPA 3.81, May 2026) who builds AI agent product UIs end-to-end. Solo-shipped Trezzit (app.trezzit.com) — a React 19 + Next.js + Django SaaS serving **600+ users** for 12+ months with **341 components, 14 contexts (no Redux), 60+ endpoints, 995 tests**. Built SiliconCrew's agent UI — a Next.js 3-panel layout (Sidebar | Chat | Artifacts) with Monaco code editor, 6 artifact tabs, and WebSocket-streamed tool-call cards — the exact pattern Julius is building.

TECHNICAL SKILLS

Frontend & Streaming UIs: React 19 | TypeScript | Next.js | Tailwind CSS | Material-UI | Zustand | React Router v7 | Monaco Editor | WebSocket Streaming | PWA | Component Architecture | React Context (no Redux) | Performance Profiling

Backend Systems & Data: Python | Django REST Framework | FastAPI | Node.js | PostgreSQL | Redis (caching + rate limiting) | Celery (background jobs) | Cookie JWT + OAuth + OTP | REST API Design | Optimistic Locking | Encrypted Backups

AI Agents & LLM Tooling: LangGraph | LangChain | MCP Protocol | Tool Use / Function Calling | Multi-provider LLM Routing (Gemini / OpenAI / Claude) | RAG Pipelines | Streaming LLM Responses | Pydantic Validation | Cursor | Claude Code

PROJECT EXPERIENCE

Trezzit — Production React + Django SaaS, Sole Engineer (app.trezzit.com)

Feb 2025 – Present

- Solo-built and shipped Trezzit (app.trezzit.com), a live React 19 PWA + Django SaaS serving **600+ users** for 12+ months — **341 React components, 14 React contexts (no Redux), 8 custom hooks**, GSAP-animated landing, Framer Motion transitions, Material-UI v6 + Tailwind, React Router v7, Recharts and react-force-graph for visualizations; PWA service worker with VAPID push, Share Target API, iOS Safari compatibility, swipe gestures.
- Backend: Django 5.1 + DRF with **60+ REST endpoints, 40 DB models, 995 tests**; PostgreSQL (Supabase), Redis (caching + rate limiting 100/hr anon, 10k/hr auth), Celery + Celery Beat + Flower for background jobs; cookie-based JWT auth with auto-refresh + failed-request queuing, Google OAuth, email OTP; optimistic locking on bills; per-endpoint p95 latency tracking and per-provider LLM cost/token telemetry in production.
- Built a two-stage AI receipt pipeline (Gemini, OpenAI, Claude, Grok) iterated from **~60% → 95%+** accuracy with semantic validation and model-upgrade fallback; built an MCP server letting AI assistants take actions across the platform (create bills, query balances, upload receipts) over the same auth and data layer as the web app.

SiliconCrew — Next.js Streaming Agent UI with Tool-Call Cards & Code Execution

Nov 2025 – Present

- Built the Next.js front-end for an LLM agent with **21 tools** — resizable 3-panel layout (Sidebar | Chat | Artifacts), 6 artifact viewer tabs (Monaco code editor, waveform, schematic, layout, structured report), WebSocket-streamed tool-call cards rendering in real time as the agent reasons, multi-session UI with per-session token and cost tracking; Zustand state, TypeScript, Tailwind, Radix UI; FastAPI + WebSocket backend, full MCP server (stdio/SSE/HTTP) and autonomous self-correction on failure. Scored **37/92 first-pass on CVPD**.

HEAL.AI — AI Billing Assistant with RAG & Document Workflows

Sep – Nov 2025

- Won Devlabs Hackathon (1st place)** with HEAL.AI — built a RAG pipeline (PDF chunking + 768-dim embeddings + cosine similarity retrieval) over uploaded insurance policies enabling natural-language Q&A, billing overcharge detection, and automated dispute-email generation via Gemini 2.5; FastAPI + Next.js + TypeScript, Dockerized.

Intel Automated Self-Checkout — Open Source Contribution

Jan – Feb 2025

- Contributed sensor analytics microservice to **Intel's official self-checkout reference architecture** — configurable data pipeline (MQTT, Kafka, HTTP) for real-time LiDAR and weight sensor data with Grafana dashboard; **PR #655 merged upstream** after Intel engineering review.

WORK EXPERIENCE

Software Developer (Sole Engineer)

Oct 2022 – Apr 2024

NCR GOLD

Bengaluru, India

- Engineered a production Django platform (PostgreSQL + Celery + Nginx on DigitalOcean) processing **18,000+ orders over 3 years**; built 3 role-based portals (admin, artisan, customer) with multi-method auth — automated PDF invoice generation and WhatsApp Business API delivery on every state transition, eliminating **~20 min** of manual relay per order.
- Reverse-engineered third-party Jewely ERP (**zero public API**) through direct SQL schema analysis; built bidirectional bridge model syncing production weights and ERP status in real time; engineered inbound WhatsApp state-machine chatbot (JSON state per user, admin + customer flows) — full accountability loop across all three portals without disrupting legacy system.

EDUCATION

Master of Science — Computer Engineering (GPA 3.81/4.0)

Expected May 2026

Arizona State University — Coursework: Artificial Intelligence · Foundations of Algorithms · Reinforcement Learning in Robotics · Perception in Robotics · Algorithm/Hardware Co-Design

Tempe, AZ

Bachelor of Engineering — Electrical and Electronics

August 2022

BMS College of Engineering

Bengaluru, India

AWARDS & HONORS

- Won **1st place at Devlabs Hackathon** — HEAL.AI, an AI billing assistant with a custom RAG pipeline (768-dim embeddings, cosine-similarity retrieval) for insurance Q&A and automated dispute-email generation.
- Won **'Best Use of AI'** at Strategy X DevHacks'25 (ASU) — built AdaptED AI, a Gemini-powered platform generating personalized flashcards, quizzes, and learning paths from uploaded documents in a 24-hour hackathon.
- Secured **2nd place at Hack SoDA 2024** (Amazon-sponsored, 24-hour) — built PassGen, a secure offline Chrome Extension for unique password generation.
